## PROJECTS

### Caelium

<https://caelium.jerit.in>

I am currently working on an exciting project called Caelium, an all-in-one platform for personal, family, couple, and work organization. Caelium aims to streamline daily life by offering features such as shared calendars, interactive maps, chat functionality, and personalized blogs. Leveraging technologies like Django for the backend and Next.js for the frontend, Caelium is under active development and is set to revolutionize how users manage their tasks and relationships.

### School Website

<https://mambethany.com>

I created a responsive Django website for M.A.M Bethany Public School, featuring a user-friendly design. The website includes a gallery section for showcasing school events and an admin panel for easy content management of photos, faculties, facilities, school leaders, important documents, and results. This project showcases my expertise in Django development, responsive design, and content management, providing the school with an engaging online platform.
